

We are a small, young, independent company with a clear strategic direction, as well as a strong focus on customer orientation and quality. As one of the market leaders, we develop high-quality dental implants made of zirconium dioxide and distribute them worldwide via an international network.

To support our development team, we are looking for the following with immediate effect or by appointment:

Junior Development Engineer (EFZ) 100% for Dental Implants and Instruments, Oensingen (m/f)

Your Responsibilities

- Modify and create drawings and 3D models using SolidWorks under the supervision of an engineer
- Creation of models for marketing, software integration...
- Assisting the R&D engineer with documentation

What you bring to the table

- Experience with CAD (SolidWorks), from conception to implementation in series production
- Team spirit, independence and a structured way of working
- Self-motivated team player who enjoys working in an extended team
- Fluent in German, spoken and written, good knowledge of English is an advantage
- Ideally, knowledge and experience in the design of dental medical devices

What to Expect

- A permanent position in an innovative, fast-growing company
- Diverse tasks and independent action
- Performance-based, competitive remuneration
- Cohesion and mutual support in a small team

Are you interested in this exciting challenge? Then we would be delighted if you would send your complete CV with a cover letter in digital form to our Head of R&D yannick.lovis@zsystems.com.
